

Application No.: 10/720,488**Docket No.: 2038-309****ABSTRACT**

A disposable diaper is formed in one of front and rear waist regions with first wings which are elastically stretchable in a waist-surrounding direction and these first wings are provided on respective body facing surfaces with first fastener-means elements. The other waist region is provided on its undergarment facing surface with, in addition to second fastener-means elements, anti-slip zones exhibiting a desired average kinetic frictional force relative to the body facing surface of the first wings.
